■ Economic Price Schedules for Unmodified Oligonucleotides

general customer			favoured customer	
item	price		item	price
OLIGO BASIC	0,56	price per base	<i>OLIGO BASIC, favour.</i>	<i>0,53</i>
OLIGO 10+	10,50	price per oligo	<i>OLIGO 10+, favour.</i>	<i>10,20</i>
OLIGO 50+	9,80	price per oligo	<i>OLIGO 50+, favour.</i>	<i>9,40</i>
OLIGO 150+	8,70	price per oligo	<i>OLIGO 150+, favour.</i>	<i>8,30</i>

A customer becomes a favoured **customer** for the rest of the year and for the following year after he has ordered oligos or probes which apply to cumulative consumption of 2000 nucleotides within this year (on every scale, term, type of modification, purification or any other arrangement).

Price schedule of **OLIGO BASIC** is applied within unmodified oligos on a scale of 40 nmol, in term B, of any length, regardless the type of purification. An order must be sent from a web on-line form or using an excel GENERI BIOTECH 's form.
 This schedule is applied if the price schedule of OLIGO 10+ or higher cannot be used.

Price schedule of **OLIGO 10+ / OLIGO 50+ / OLIGO 150+** is applied if the order contains at least **10 / 50 / 150** pieces of unmodified oligos on a scale of 40 nmol, in term B, shorter than 30 bases (including), regardless the type of purification. An order must be sent from a web on-line form or using an excel GENERI BIOTECH 's form.

■ Chain Pricelist of Classified Oligonucleotides

general customer					
item	40 nmol	200 nmol	1 µmol	10 µmol	
OLIGO term B, class.	0,95	1,30	3,80	18,70	price per base
OLIGO term A, class.	1,32	1,70	4,90	20,80	price per base

favoured customer					
item	40 nmol	200 nmol	1 µmol	10 µmol	
<i>OLIGO term B, class., favour.</i>	<i>0,76</i>	<i>1,10</i>	<i>3,20</i>	<i>17,80</i>	price per base
<i>OLIGO term A, class., favour.</i>	<i>1,13</i>	<i>1,50</i>	<i>4,30</i>	<i>19,70</i>	price per base

If ordered oligos do not fit any of the categories of economic price schedules (e.i. they are either ordered in term A or on other scale than 40 nmol or ordered a different way than from a web on-line form (or using an excel GENERI BIOTECH 's form) or containing a modification, their price is calculated according to the pricelist of classified oligos. Thus, price of a base is calculated based on the ordered scale and its delivery term. The price of the oligo then equals the price of one base multiplied by a number of bases.

■ Surcharges for Purification of Oligonucleotides

item	40 nmol	200 nmol	1 μ mol	10 μ mol	
OPC purification	32	47	62	123	surcharge per oligo
HPLC purification	85	112	149	N/A	surcharge per oligo

■ Surcharge for Quality Check Ordered by Customer

item	40 nmol	200 nmol	1 μ mol	10 μ mol	
HPLC quality control			9		surcharge per oligo

■ Surcharge for Degeneration

item	surcharge	
inosin	42	surcharge for implementation of 1 to 18 molecules of inosin on a scale of 40 nmol or 1 to 10 molecules of inosin on a scale of 200 nmol
degeneration by mixture of bases	w/o surcharge	
degeneration at the 3'end	w/o surcharge
